

Pilgrims Rest Homeschool

We have been using Arcademics for the last 5 years, our children very much enjoy using Arcademics. The Arcademics games cover a good range of subjects. We particularly like to use the spelling bee game. I have customised the game so that they can work through a complete curriculum of spelling words. I have easy words for the younger children and more difficult words for the older children. I have even started racing the children recently myself with the spellings to encourage them to beat me at the game.

One of the features I like about Arcademics is that the children can race other real children around the world in a completely safe environment. They can also set up games with their own family or friends. Even if their friends happen to be in a different house at the time.

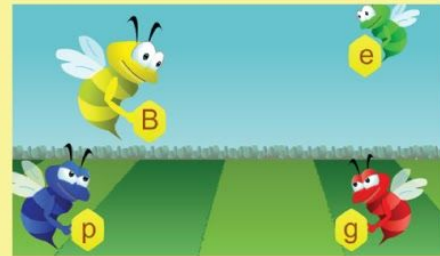

The highlight of the Arcademics year is the online Cup competition. Thousands of children compete online in real time to win real prizes, the competition goes on over 48 hours and my children are always determined to win a prize. This means that they spend hours and hours learning multiplication in a fun way.

As a parent, the reports and analysis section of the website is very useful. I can check up on which games the children have been playing, how many games of each type, and how long each child has been playing for. I can also monitor their progress, the percentage correct, which maths problems or spellings they struggle with the most, and where their strengths are. I also customise the games and assign different games to different children. You can even assign different games at different times of day.

Arcademics is a very useful addition to my home education resources - one that the children look forward to doing!
